

# ONLINE TRAINING PROGRAM

## BREATHING AIR COMPRESSOR THEORY

### Introduction:

**Bauer Compressors Asia** is pleased to offer an online training option, based on the theory elements of our combined level 1 & level 2 Technician Course.

Applicants are invited to join a series of live webinar presentations, which offer the full interaction of a classroom environment, together with the latest technical and product updates.

To allow for a convenient and relaxed learning experience, the individual webinars will be scheduled over a number of days, according to candidates' time zones.

As an economical solution to ongoing training and personal development, our online program offers many benefits for a wide range of our customers.

### Format:

#### a) Technician Level 1 & 2

Completion of the online program will accredit towards eventual attendance at one of our Authorised Training Facilities (Singapore, Thailand and Bali) where a special 2-day practical workshop concludes the full Technician program, resulting in factory certification.

For those already graduated, our on-line program acts as an update and 3-year re-validation of an existing Technician certificate. Attendance for practical training is optional.

#### b) Technical support

For those not directly involved with maintenance and repair, our new training format may also appeal as a stand-alone course. We offer an in-depth look into compressor systems and how they work - a unique opportunity to develop knowledge in support of compressor operations.

A wide range of individuals, roles and responsibilities are involved in the Breathing Air market. Access to our program is an important step towards increased knowledge, understanding and safety awareness throughout this specialised field.

Accreditation is awarded upon completion of the on-line program. As a stand-alone course, it is not supported by factory certification.

### Content:

Individual presentations range from 1.5 to 3 hrs in length but, as a modular training scheme, may be split into smaller units to meet individual needs and schedules. Topics to be completed are:

- COMPRESSOR SAFETY
- BREATHING AIR PRODUCT
- COMPRESSOR THEORY
- LUBRICATION SYSTEMS
- COMMON TERMS & FAQ
- PURIFICATION SYSTEMS

### Resources:

There are no pre-requisite qualifications to participate. All courses are conducted in English. Presentations are conducted using the Zoom communications app. Download the free browser (Zoom Client for Meetings) at <https://zoom.us/download>. Invitations to specific meetings are issued prior to the scheduled event.

Candidates will require access to a computer with webcam and microphone. Learning materials in PDF format are issued to candidates for printing/reference prior to the live event.

Please contact us for any further information.
